Abstract

Gaining knowledge on educational trips at an affordable cost has been given utmost importance. At present, if we want to meet all the needs of people, just as finance, education and judgment are needed; the great wealth called knowledge is more needed. Therefore, this attempt is aimed at visual perception of truth in terms of practical direct education with moral education. So that the knowledge can be accepted and mastered very easily, then indeed the subject will become universal.

Any trip i.e. to friends, relatives, neighborhood, village, city, state, country, continent, wherever one goes, a joy arises in the heart. If we include educational subjects with it, then there is no more talk. Applying knowledge through proper education in the field of information collection, preservation, publication, workplace, literature, culture focusing on the educational issue will create an example for the present and future generations. In this, everyone including students, teachers, researchers, common people and even the people outside the census in the country will be happy to get the status. And a wholesome environment will be created in the country. In order to obtain direct and indirect true knowledge, I shall proceed by means of travel or wandering. This procedure is very inexpensive and often happens to everyone. It is possible to do multiple tasks at a single cost easily. It is possible to get multiple good results such as improvement of knowledge, increase in consciousness, its need is immense in education. Travel is an essential part of education. Many things in this world teach us to think. Also, it helps a lot to understand that there are many things left out of knowing. The person finds himself in something successful. Knowledge is about things or things that possess full enjoyment. It is possible to get a taste of education revolution liberation only by traveling here. So there is no room for denial. Be it on foot, bicycle, rickshaw, bus, rail, ship, plane, whatever it is, you have to go out for the purpose of travel. Be it friends, relatives, relatives, family, if you go out for a few hours or days, the taste of life becomes different.

Travel is the main source of happiness and travel is the ultimate means of liberation.

Keywords: *Easily, Possible, Affordability, Everywhere, Educational, Travel, Excursions, Expedition*

Introduction

The purpose of this section is to make learning on educational trips easily accessible.

Everyone wants to know and understand all the people of the whole world. But knowing or understanding him is not a very easy task. If you want to understand it, the mind, mentality, education, initiation, above all the need to leave the house and mingle with nature and become more social.

Where possible, educational travel is mainstreamed to fully acquire knowledge.

From prehistoric times we find cave and koto dwellers engaged in animal hunting. Due to scarcity, Guha left his own place and went to another place. took the form of a nomad. There they got involved in farming as well as hunting, new ideas, artistic sense, started connecting with the environment and nature. A good relationship was created. He adapted himself to the struggle. Learned distribution of wealth, animal husbandry, domestication. Invented gathering games, building resistance, etc.

In Harappa, Mohenjo-Daro, Babylonian, Mesopotamian civilizations we find migration or itinerant lifestyle. In the meantime, how much reform culture, science, technology, society, and civilization have made great progress in that era.

In the later stage, Alexander, sculptor Da Gama, Marco Polo, Fa Hiuen, Hien Tsang, Buddhist Tirthankars traveled abroad to know and understand the truth.

Even in Puranas, gods, giants, demons wandered freely in the ten directions of the heavenly underworld. traveled New meditative concepts have emerged which have been very effective in shaping this society. Again, in modern times, Mahatma Gandhi, Swami Vivekananda and many others have traveled to different places of the world, including India, and collected the knowledge of etymology, which has become a very necessary subject for the people of the world. The journey is also mentioned in mythology, medieval and modern literature. Where nature is love, livelihood, biodiversity, plants, animals, people, all have a coexistence theme. We hope to enrich others with our own prosperity and extend it to the cause of enlightenment. There is a possibility of building a bridge between students, teachers, researchers and common people. I strongly believe that if it can be carried forward with the cooperation of everyone, a good social system can be created.

Author Summary

Why this research is needed. In this context it can be said that if resources are misused, individuals and the country face direct and indirect losses in one way or another. For example, if we follow this mindset of just traveling or just visiting, we are deprived of complete knowledge which is not what we want. But if we open our eyes with pleasure in traveling and try to know them from different aspects, we can become more social by enriching ourselves in thinking about environment, nature, society which will pass us to ecstasy. As the preceding points suggest, it is easy to grasp the knowledge in travel while mastering a novel technique that focuses only on travel. I've tried to take seriously any trip, big or small, that has special arrangements for gathering information. Its weather, geography, sculptures, monuments, rivers, streams, canals, bills, people, biodiversity, plants, environment, nature from which one will easily adapt oneself and take care to be alone with nature.

What is particularly easy to identify is that it is easier to focus more on your love. Knowing this well, several things start to make sense. It is easy to know that it is possible to acquire this knowledge at a small cost. Many references are matched in field work. The person becomes very energetic or forward. A lot of spontaneity is seen in his body mind. It involves many things, the way the body, mind, and soul go from unconscious to conscious. Being human like humans, its unique sense of beauty is also included in this thing called travel.

How to gain knowledge on an educational trip that is easily affordable

The things which are necessary to live well in the world

Food, Clothes, Residence, Religion, Money, Desire, Infinite freedom

Bliss is the supreme achievement of Indian philosophy dominated by knowledge

Education, Consciousness, Final change, Freedom

The main cause of suffering

Not finding happiness in little things, Greed. Avoiding the truth and grasping the hand of falsehood for lack of knowledge, Lack of real traditional and institutional education. Inability to socialize with people. Not being able to overcome fear. Lack of proper systematic application for enlightenment. Lack of respect for spiritual, living and non-living, lack of different kinds of things.

Some epics which are the nectar of knowledge:

The Quran, The Puran, Veda, Vedanta, Bible, Tripitaka, Zend-Avesta and much more.

Some caste religions

the Hindu, Sikh, Buddhist, Jain, Muslim, Christian, Persian, Santal, Cole, Bhil, Gaaro, Khasi, Jarawa, Confucianism, Charvaka, Other...

Great joy and peace: Emancipation requires the combined efforts of all castes and religions which are unique in building equality.

A few objectives : Is it possible to acquire knowledge easily? Is there acceptance of direct and indirect? Is the need to mind travel undeniable? What is the importance of travel in education and knowledge accumulation? How universal is the educational knowledge project for the completion of regional databases?

People who are able to take advantage of knowledge gained on educational trips. Every people in the society who are out of the census, students, teachers, researchers, readers, interested travelers, local people.

Excursion and expeditions are all possible.

Interested and disinterested both can come under educational knowledge. Fruits are obtained through development of mind and soul. Organized and unorganized works are useful for present and future aspirants. Highlighting the structure of society's diversity easily enriches the depth of thought in a smooth and systematic way. The objective helps to become caring towards the traditional and institutional learning environment. Helps to enjoy life to the fullest, Aids in the realization of pleasure.

The way I move towards perfection is in the pursuit of knowledge through small and large journeys.

Small but routine savings, Invest the money saved in a good cause. Care and raise it, success in reproductive production by innovating meditation concepts. Vow to earn a living, active participation in the academic field. Writing and publishing several books focusing on hobbies, surveys, research. Become a householder, becoming caring towards the education and culture of boys and girls, giving first priority to the micro unit which is family in the society. Being able to carry on with as little envy, ego, pride as possible, emphasis on exhibition rather than competition.

It is better to focus on certain aspects of the educational trip to complete the knowledge base

Accompanying the local people, understanding the market, buyers and sellers and the environment, respecting the traditional and modern culture of the place, eating habits, clothing, Regional history, Biodiversity, Rivers, Canals, Hills, Mountains, Deserts, Crop fields, etc.

Architecture and Sculpture, music, literature, Mythology, archeology, Geography, plant theory, temperature, the weather, agriculture, animal theory, Anthropology. the weather, the language, Trying to find an understanding behavioral object in everything, Keeping track of national progress in science and education.

Education-Knowledge-Environment-Nature Mind-philosophy, the topic of travel has come up in modern literature apart from any epic.

No substitute for knowledge has been discovered till date to find the real truth directly or indirectly.

So, how is it possible to obtain this knowledge easily, the acceptance of direct and indirect, the need for conceptual travel is undeniable? This is what I have drawn with the hand of travel *to grasp the educational knowledge.

The collector of which is every person in the society, including students, teachers, researchers, readers, travelers, and local people who can open their eyes and bring many things under their educational knowledge.

I believed and applied it wholeheartedly and got results, so I saw that it would give a special direction to students, teachers, researchers, and even those who are interested in working on this topic in the future.

In this, it becomes easy to highlight the structure of the diversity of the society for all, to enrich the depth of the different aspects of thinking in a very smooth and systematic way. Through this educational journey we will be able to overcome our objective of traditional and institutional education to become caring towards the present and future life and even the environment and also enjoy life to the fullest.

Since 1981, buying colorful fish with 10 paisa of school Tiffin, raising pet fishes, rearing breeding, earning, active participation in academic field, writing several books with emphasis on hobby-study-research, becoming a family man, caring for children's education and culture, Giving family first priority which is a micro unit of society formation and realizing a beautiful life is a life of special honor that has given me so much fulfillment in this Exploring knowledge through small and big travels.

I have repeatedly felt that many people wish to have a happy life in order to live well which is one of the realizations of Indian philosophy and in this social respect, there is a special need for the fulfillment of livelihood and a happy life acquiring knowledge.

Besides, when knowledge spreads among all, then the rules of change in the world become clear.

I will also mention here how much knowledge is the sharer of good and bad in life to build a welfare society with people, how much the society is prosperous, how good results can be obtained by conducting academic excursion expeditions.

From the beginning of my birth in 1973, there was a great financial crisis in my family. It further increased in 1981 and reached its peak in 1990.

It was during this time that the responsibility of a family of six members fell on my shoulders. As a result fishes of my hobby that grew in number showed me the light of hope.

I kept the fish from the home potted tub then to the glass jars, plastic packets and trays with water on the roadside near the market for sale.

I noticed the enthusiasm of people, one by one they began to gather near my colorful fish and aquatic plants in the aquarium. A small amount was sold, many of those who bought the fish reported dying, many protested, scared me. I became afraid. I thought of running away from the business. Starting to meet good people, they started to give me courage to move forward. I got advice to look for problems. I started studying while looking for problems. Tried to take advice. The direction of the subject began to open.

I started doing reference study with little knowledge.

Why are the fishes that have been normal to me but dying in a few moments or days after going to others? I tried to know from the ground level. I tried to understand, write and apply with an inquisitive mind.

Got good results

I made a habit of questioning others. A fair amount of geography, geometry and chemistry emerged from the answerers. I numbered it in several ways. A way to solve the problem came out. That's what I told the troubled consumers. The methods were changed. Mistakes were corrected. They solved their problems. The fishes were saved from premature death. The purpose of bringing up this step by step topic above is to conquer fear. Education is required for the need of knowledge or to search for truth. Otherwise nothing is possible. How is this educational inquiry possible? We think about this question constantly! Yes, currently it is possible to seek knowledge on specific topics easily, so I will briefly discuss it here.

For ages many scholars have compared knowledge to water. Water is a simple liquid substance and matter which is easily absorbed by the body-mind-soul and it is a very necessary element for our survival. Knowledge is the same way we adapt life to the social environment. So by judging everything in a beautiful and orderly way on the hard stone of knowledge, let us advance the totality in the worship of the beautiful. **My fear was over.** My aquarium fish business survived. Gradually it reached other states from the local market. This word spread in the country and abroad. Here is a brief table of the methods by which knowledge can be acquired

1. To acquire their qualities from parents
2. Trying to see-hear-understand the qualities of all the family members.
3. Seeing-knowing-understanding of the environment to construct a person in the form of an icon of one's life.
4. To delve deeper into thinking about all phenomena of family-environment-family contacts.
5. Studying newspapers. Underline the part of the newspaper that you like. Trying to say something on top of that. Write it down immediately on that paper. Save the paper if necessary. By cutting the paper, write down the year, date, name of the paper, reporter's name, page number, how many digits.
6. Documentation. Paper cutting, saving your short or full text in files, maintaining proper file names.
7. Relating books, movies, dramas, stories, fables, myths in reference. Know recent publications, journals, etc. Also keep close, plan a library of your own, even if it's small. To make it likeable, to love it, to care for it.
8. To point out both the good and bad sides of the society in a good way. Dedicating all work to social cause for the welfare of society.

9. Always have an inquisitive attitude wherever you are.
10. It is always simple and lively to stay true to your focus. Assessing and recording the value of the findings.
11. Use of pen, pencil, paper with dignity. Direct and indirect interaction with many people.
12. Creating content titles, sequencing and defining titles.
13. Creating Objectives from the Heading or Creating Headings from the Objectives.
15. Finalizing the mission or target.
16. Also making sure I have what I want to say at the end of the story, article or intellectual discussion topic.
17. Clearly designing or blue printing the vision.
18. Imagining a possible hypothesis.
19. To understand and apply everything.
20. A nice conclusion.
21. First of all, a concept or abstract can be written on the selected topic, and a preface or closing or introduction can be written.
22. The Indian scenario is a unique thing and if the scenario of the outside world is written, the subject becomes mind-boggling in terms of knowledge.
23. Content issues should be addressed.
24. The way to solve the problem should be told.
25. Research gaps or knowledge gaps need to be addressed.
26. Arguments regarding title framing must be given full weight.
27. Tools and techniques must be used for knowledge of the subject.
28. Sample study should be done.
29. The research method of knowledge must be fixed.
30. Limitation of study should be fixed.
31. Writing must have originality, Must be unique and innovative.
32. How rational is this matter; Universality or ubiquity can be determined with certainty.
33. Why the inquisitive thought this matter must also be determined.
34. Statistical analysis should be done on the research samples.
35. Prepare some questions for enlightenment which will construct the objective by presenting the objectives correctly.
36. Questions of marks 3.5.7. or 9. etc. scale should be standardized.
37. The work should be extended in an elegant manner with trust and dignity towards people and society.
38. The task must be carried to completion with the assistance of one or more guides or supervisors for a good state.

Materials and Methods

Why the need for affordable educational travel?

Knowledge is essential to properly control the past, present and future, and this can be easily gathered through educational travel. Without knowledge, no creative planner can be considered the personification of man, the greatest creature of the animal kingdom. He will remain stagnant in society. It will become a major hindrance to the welfare of living beings in society and individual life.

This knowledge is needed everywhere in the world. Moving around, mixing with nature and people, going out, riding, taking part in trips, visiting and traveling to the homes of loved ones, relatives, known relatives, going, staying, eating, living all under educational travel and in the perspective of knowledge. You can find very good things in the overall field, can be learned, applied, and the work remains for the welfare of the society.

Result with figures

Here is an attempt to do so. I applied Descriptive Method with emphasis on Ernest Hemingway's Iceberg Theory, where tools like SPSS (Statistical Package for Social Sciences) and MS Word and Excel has been used.

20 case studies done and

I asked 150 people this question. Most of them said it was necessary.

Out of 150 respondents

92% stated that knowledge can be acquired easily through educational travel and it is highly beneficial for developmental or welfare states i.e. very necessary

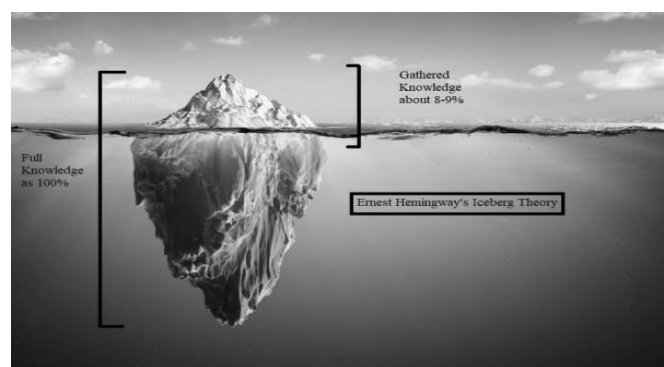

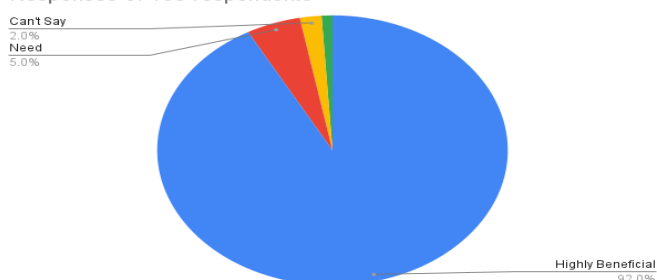

5 % of people reported Need

2 % said can't say

1 % said no need

0 % said no need at all

Responses of 150 respondents

So it turns out that making any journey into an educational journey to gain 92% of the knowledge out of 100% will pay off in all aspects of learning.

So this matter can be taken with a full dignity which is understandable.

Here using a 5 point Likert scale further standardizes the content, makes it more significant along with interpretation and helps in building positive hypothesis which can be accepted.

Simple methods of extracting knowledge are greatly needed. Through this we can control everything properly. So it is very important to apply it now. A lot can be learned easily if travel is applied intellectually.

The tools of the excursion and expedition

References literature on the subject, handy or portable design seats, one or more assistants trained on the subject, pen, Pencil and Notepad, mobile phones, cameras, drawing seats, sample collection bags and other equipments. I am fortunate to have the guidance and active support of many experts and scientists from various fields of knowledge.

Data collection techniques to advance the project

Skilled leaders are needed. Determine the target audience. Measuring the target population. Finding a good PR person, Seeking the support of local club NGO organization members. Local schools, colleges, universities, neighborhood citizens, environmentalists, fisheries offices, social media, tea vendors, market vendors, suppliers, hotel restaurant breakfast, lunch, dinner attendees, hotel employees, tourists and enthusiasts need to be kept together. Organization of meetings, associations, seminars, conferences. Organizing tea, tiffin and snacks. Portable decorators, arranging sound. Find ways to motivate people. Keeping their trophies, mementos, certificates organized. Posters, banners, festoons to display according to the content. Presenting beautifully the simple way in which people and society are benefited. Involving people in this project and giving them an opportunity to express their views. Have some questions ready and ensure feedback

How educational travel for knowledge can benefit people

Keep trying to bring the project to life by writing down the preconceived notion beautifully. It's great to be able to spread the process across the team. The project is progressing with completeness and following the thorough step by step procedure of the topics that will come up should be planned to be published in any newspaper, magazine, journal in a more beautiful way.

Besides, a book can be published on this topic. In the hands of a good publisher who will deliver your enlightening speech to an international audience with an ISBN (International standard book number) door to door. In a social welfare interest group you and your team will feel very proud in present and future perspective.

Discussion of the subject

The problem lies in the content itself.

Several problems can be observed.

Educational travel to acquire knowledge should be made even easier and affordable. It is with this purpose in mind that this paper is written but it is necessary to review the problems faced in doing so.

First of all:

Many people have very little idea about this so it is very difficult to get them on this path.

Secondly

In no way do they want to connect education with travel, moreover, many are of the opinion that the other i.e. travel can become soil for it.

Thirdly

A common concept in the society has often been highlighted by many. Knowledge is something that is freely available from many. What is the need for it?

Fourthly

There is no awareness of education, earning, knowledge in travel. It is not promoted. Voluntary organizations, private entrepreneurs and even Sarkar Bahadur have failed to take any public awareness role. The media is also working here without any responsibility.

However, some sections of students, teachers, and researchers still take escorts and expeditions seriously, and some sections of the general public are also encouraged to see them. However, it can be implemented constructively and effectively through collective efforts. However, many people have opined that it will be good if the rest of the education is included with special emphasis on travel. Studies have shown that a 3:1 ratio of travel to hobby education i.e. a mix of 75% travel and 25% education will increase acceptance among many. Although an educational travel plan can be done this way with 75 percent travel, 10 percent entertainment, 2 percent food and drink, and 3 percent education, the environment is more productive.

From the findings it appears that all but a few people have decided to include education in travel. And welcomed the joint effort. All agreed for the good of mankind.

The limitation of this subject means that nothing is imposed. Rather, if it is possible to apply it, it is likely to bring success through understanding the subject with dignity. Education and social science background have been used to define its field. This field of research has been kept out of the realm of pure science.

Conclusion

150 travel-hungry students, teachers, researchers, general public and vagabonds were asked through closed and open-ended questions.

How much education is needed in affordable educational travel? Most stated that there are requirements and they are complementary to each other. However, it is not possible to apply it in real land in a very simple way. I have tried to understand with this little research and general idea that there is a need. The construction of this bridge is possible with the united efforts of people from all walks of life to understand the past, present and future correctly.

The role of private initiative, NGO and government is undeniable. There needs to be a consistent and flexible attitude within the media as well. Plan project implements need to be incorporated with great discretion. This will allow the public to participate more boldly in acquiring knowledge through educational tours that are easily affordable. Only then can the individual himself walk properly in the field of social prosperity.

Acknowledgements

I am very grateful to my guide, Prof. Dr. Manjusha Tarafdar, who worked tirelessly to help me in presenting this topic, data analysis and interpretation.

My friends well wishers and my Seacom Skills University Ph.D. All the professors in the department clarified the issues to me multiple times.

I am very thankful to my family they have been very encouraging and helped me to do the work.

Author Contribution

Since 1996 I have traveled to different places focusing on my academic field and wrote several books on extracting this travel knowledge. I also Tried to keep a small sample by studying regional history through travel. Explore Chandannagar, Biplab Bhoomi Chandannagar and Chandannagar A Biography in Pictures book published with ISBN has helped some people. Even a little Academic Tours, Excursions and Expeditions *Sagardwip, Sundarbans, Jalangi River expeditions have set an example of success.

Recently 29/9/2024 to 5/10/2024 for 7 days *Andaman and Nicobar Islands expedition.

Through these, it will be possible to convey the message of biodiversity, society, environment, nature, patriotism to more people from person to person.

How Make a contents.

From a 1972 book on the Nicobar Islands, translated by Savita Sengupta and written by Kaushal Kumar Mathur.

Foreword, Introduction. Historical Background Geography, natural state. Occupation of village. society people, Economics Craftsmanship and Technology. House construction. Physical Culture and Morals Health Education Sports and Activities, Cultural event. Religion and culture. ADMINISTRATION AND DEVELOPMENTAL WORK GENERAL CHARACTERISTICS OF NICOBARS CONCLUSION APPENDIX.

Images can be taken in the image index

Nankauri Port. The Dagars are some of the Spanish tribes of the Nicobar Islands. Betel nut of Kar Nicobar. A wide village. View of a village in Kar Nicobar, A rural route of Kar Nicobar. A village on the road that goes around the island of Kar Nicobar. Nan Kauri's girls in old clothes. Two Nicobarese couples from the Nankaori Islands. A young man from Nan Kauri in old clothes. Climbing the coconut tree. A few idols or tax people elsewhere than in Nicobar. It is kept in the house to ward off ghosts. Nicobari baskets and Pantanas mats. Round Nicobaric house ceiling. Bhushita is a Nicobarese girl in ancient ornaments. by boat. Bringing the boat to shore after boating. Pig fight. stick game. Kar Nicobari girls volleyball game, Dances of the Nan-Kauri Islands.
