ABSTRACT

Agriculture started thousands of years ago, but no one knows for sure how old it is. Agriculture is not only growing food for people and animals but also selling those products effectively. Many people still live by subsistence agriculture, on a small farm. It is important for there to be enough food for everyone. The food must also be safe and good. People say it is not always safe, because it contains some chemicals. Here we launch an application in which different farmers from different locations to can post their raw food products on this website. Only registered farmers will be capable of selling their product through this website. Suppliers and other users can buy the cultivated raw products from the available farmers.

This application helps farmers ensure greater profitability through direct farmer to dealer and farmer to farmer communication. This service boosts business communication and brings transparency to the system. The farmers may also submit their gradients and complaints to respective authority using their farmer login on a separate complaints page and authorities will get access to that page regularly using their login id and passwords.

We have an android application also along with the web. Farmers can have the android app. It provides necessary notifications in real-time. So that he can act upon necessary. Our system also has a section to find the best farmer monthly. We use reviews and ratings of users to find out it.

Keywords: *Organic, Product, Farmer, Sentimental Analysis, Microsoft visual studio 2010, SQL client.*

This project contains four modules

- Admin
- Farmer
- User
- Public user

1. MODULE DESCRIPTION

Admin

Admin can log on to the using userid and password and he can approve/reject farmer he can also add new seeds/crops/fertilizer and manage.

Farmer

A farmer can register to the system and he can enter to the system using the user id and password. He can view the crop/seed/fertilizer and send the request. He can also add the selling product and retrieve the payment.

User

The user can register and login to the system and he can view the product and send a request and pay amount. He can also view the crop/seed/fertilizer and he can add feedback.

Public user

A public user can search the product but when he wants to buy any product he must register to the system. When a public user registered then he becomes a user.

2. SYSTEM STUDY

A. Existing system

The current system is time-consuming and also it is very costly because it involves a lot of paperwork. To manually handle the system was a very difficult task. But nowadays computerization made easy to work

The following are the reasons why the current system should be computerized:

- To increase efficiency with reduced cost.
- To reduce the burden of paper work.
- To save the management for recording details of each and every member and employee.
- To generate required reports easily.

Limitations of the existing system

- a. Time consumption
- b. Paper work
- c. Storage requirements
- d. Less reliable
- e. Accuracy
- f. Difficulty in keeping new records

To avoid all these limitations and make the system working more accurately it needs to be computerized.

B. Proposed system

Separate login areas with appropriated functionality for farmers, administrators, and users. A separate page where only farmers can post complaints and only assigned administrators can read and edit this page. An effective GUI so that rural person may easily use the service. Can be over for multiple villages to communicate and deal with each other.

The scope of proposed system

The system proposed has many advantages.

- Farmers can directly contact dealers by searching online.
- Farmers may submit their grievances online.
- Farmers get notification of any new offers/schemes.
- Farmers can directly connect with Admin.

Table design

In the proposed project, 14 tables are used.

- **TABLE NAME:** Login.tbl

login

Primary key: Id

Column Name	Data Type	Description
Id	Int	Login id
User_nme	nvarchar	User name
Password	nvarchar	Password
User_typ	nvarchar	User type

- **TABLE NAME:** Farmer

Farmer Registration

Primary key: farm_id

Column Name	Data Type	Description
farm_id	Int	Farmer id
Farmer_name	Varchar(50)	Farmer Name
Type	Varchar(50)	Farmer Type
Gender	Int	Gender
Dob	Int	Date of Birth
Email	Varchar(50)	Email
Pin	Int	Pin code
Password	Varchar(50)	Password
Status	Varchar(50)	Status

- **TABLE NAME:** User_tbl

User Registration

Primary key: u_id

Column Name	Data Type	Description
u_id	Int	User Id
user_name	Varchar(50)	User name
Gender	Varchar(50)	Gender
Address	Varchar(50)	User address
Dob	date-time	Date of Birth
Email	Varchar(50)	Email
Phone	Varchar(50)	Phone
Pin	Int	Pin code
Password	Varchar(50)	Password

- **TABLE NAME :** Product_tbl

Product Details

Primary key: p_id

Column Name	Data Type	Description
F_id	Int	Farmer id
P_id	Int	Product id
Product_name	Varchar(50)	Product name
Price_per_kg	Varchar(50)	Price per kilogram
Stock	Varchar(50)	Total stock

- **TABLE NAME :** Crop/Seed/Fertilizer_tbl

Crop/Seed/Fertilizer Details

Primary key : c_s_f_id

Column Name	Data Type	Description
c_s_f_id	Int	Crop seed fertilizer id
crop/seed/fertilizer_name	Varchar(50)	Crop seed fertilizer name
biological_name	Varchar(50)	Biological name
Quantity	Int	Quantity
Description	Varchar(50)	Description

- **TABLE NAME :** Request_tbl

Request Details

Primary key: r_id

Column Name	Data Type	Description
r_id	Int	Request id
U_id	Int	User Id
User_type	Varchar(50)	User type
Product_name	Varchar(50)	Product name
Quantity	Int	Quantity
Phone	Int	Phone number
Status	Varchar(50)	Status

- **TABLE NAME :** Payment_tbl

Payment Details

Primary key: pay_id

Column Name	Data Type	Description
pay_id	int	Payment id
U_id	nvarchar	User Id
p_id	int	Product id
Amount	nvarchar	Amount

- **TABLE NAME :** Complaint_tbl
Complaint Details
Primary key : c_id

Column Name	Data Type	Description
c_id	int	Complaint id
farm_id	int	Farmer id
Complaint	Varchar(50)	Complaint
Reply	Varchar(50)	Reply

- **TABLE NAME:** Feedback_tbl
Feedback
Primary key: f_id

Column Name	Data Type	Description
f_id	int	Feedback id
u_id	int	User id
feedback	Varchar(50)	Feedback

- **TABLE NAME :** Notification_tbl
Notification
Primary key : n_id

Column Name	Data Type	Description
n_id	int	Notification id
notification	Varchar(50)	Notification

- **TABLE NAME:** Weight_tbl
Weight Details
Primary key: acc_id

Column Name	Data Type	Description
Weight_id	int	Weight id
Weight	int	Weight
Word	Varchar(50)	Word

- **TABLE NAME :** Stemmer_tbl
Stemmer
Primary key : acc_id

Column Name	Data Type	Description
Stemmer_id	int	Stemmer id
Stemmer_word	Varchar(50)	User id

- **TABLE NAME:** Review_tbl
Review Details
Primary key: id

Column Name	Data Type	Description
id	int	Review id
Farm_id	int	Farmer id
Rating	Varchar(50)	Rating Farmer

- **TABLE NAME:** Rate_tbl
Rate Options
Primary key: rat_id

Column Name	Data Type	Description
rat_id	int	Rate id

Request_id	int	Request id
Product_quality	Varchar(50)	Product Quality
Behavior	Varchar(50)	Behavior of farmer
Root_description	Varchar(50)	Root Description

3. CONCLUSION

The system that I developed was implemented and tested with real data and were found to be error free. Also, it is found the system will work successfully. I tried to make the system maximum user-friendly. The system is protected from any unauthorized access by giving user name and password during the login process.

This project will be helpful for the organic farmer. Farmers can sell their products without a dealer. In the existing system, farmers can sell their products only in the markets. So that they will not get the expected profit due to bargain system, which is not possible through online. In the proposed system rating option so that users can choose better farmer according to the rate review.

All the necessary validations are carried out in this project so that any kind of users can make use of this software. It asks users to re_browse the image and the manual for the item to be modified.

5. ACKNOWLEDGEMENT

The satisfaction and euphoria that accompany the successful completion of any task would be but incomplete without the mention of people who made it possible, whose constant guidance and encouragement crowned by efforts with success. I consider it my privilege to express my gratitude and respect to all those who guided and inspired me in the completion of this project.

I am greatly indebted to my Honorable Principal **Dr. K. M. CHINNADORAI**, M.Com. MBA, MFT, MS., M.Phil., Ph.D., Hindusthan College of Arts And Science, for permitting me to undergo a project work at Hindusthan College of Arts And Science, Coimbatore.

I express my profound gratitude to my Director **Dr. A. V.SENTHIL KUMAR**, MCA, M.Phil, P.G.D.C.A., Ph.D., Hindusthan College of Arts And Science, Coimbatore, for faithful discussion, constant support and encouragement and put me in right path, for valuable suggestions and timely help in each stage of my project.

I take pleasure in thanking my project guide **Mr. A. GANESAN**, MCA, M.Phil, Associate Professor, PG and Research Department of Computer Applications who took keen interest in my work and put me in right path, for valuable suggestions and timely help in each stage of my project. My sincere thanks to all staff members of the PG and Research Department of Computer Applications, for their supportive encouragement.

I am extremely grateful to my project coordinator **Dr. C. DANIEL NESA KUMAR**, MCA, M.Phil, Assistant Professor, PG and Research Department of Computer Applications for extending his support and guidance throughout the project

I owe my acknowledgements to one and all, who have directly or indirectly aided me in completing my project.
